

MindFreedom Ireland

**Join our protest to stop the inhumane practice of
Electroshocking**

3pm, Sunday May 17th at the GPO, Dublin

**Contact us for arrangements:
0877503243**

Did you know:

- The majority of victims are older woman
- The force that pushes the electric current through the brain varies between 70 and 460 volts
- A standard voltage of kitchen equipment is 230 Volt for safety reasons
- ECT has a long-term negative impact on mental and on physical health
- This means for example: losing the ability to play a musical instrument, losing the memory of giving birth to your firstborn, or losing other physical abilities
